Recruiter
TE Connectivity
Oceanside, CA

Dear Recruiter:

I am writing this letter to get a chance to interview for the position of Manufacturing Engineer I. I learned of the opening after seeing it on the TE careers page.

I am interested in the position of Manufacturing Engineer because I want to join the ranks of a Thomson Reuters Top 100 Global Innovator. In this day and age where every one is dependent on a network, proper connectivity is paramount at ensuring business is done in the most efficient manner. Coming from a Mechanical Engineering background, I am able to understand that life is full of irreversibility and it is up us to minimize it. Knowledge of stress/strain, cycles to failure, the laws of thermodynamics, and basic cost/benefit analysis have helped me to understand the world. I would ensure that wherever applicable this learning is applied in the Manufacturing Engineering role.

At the moment I am working full time, however, I am capable of scheduling an interview within a weeks notice because of the ability to work from home. My phone number is (619)-248-0717. Thank you for taking the time to consider my credentials.

Sincerely yours,

Thomas M. Rodriguez
